PROFILE Backend and Full-Stack Software Engineer specializing in Node.js, TypeScript, MERN, real-time systems, and AI/LLM-integrated applications. Experienced in building and shipping end-to-end web and mobile applications, REST APIs, WebSocket-based systems, distributed architectures, and RAG pipelines. Strong focus on backend engineering, system design, and scalable application architecture.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL, Java, C
- **Backend:** Node.js, Express.js, REST APIs, WebSockets/Socket.io, JWT, Google OAuth
- **Frontend & Mobile:** React, Next.js, React Native, Tailwind CSS, Redux, Vite
- **Databases & Queues:** MongoDB, PostgreSQL, Redis, Redis Streams, BullMQ
- **AI / LLM:** RAG Pipelines, Vector Search, Qdrant, FAISS, Ollama, Groq API, Prompt Engineering
- **DevOps & Tools:** Docker, GitHub Actions, AWS EC2, AWS S3, OpenTelemetry, Vercel, Render, Cloudinary, Git, Postman, Linux

SELECTED PROJECTS **Zuvo | Distributed Microservices Platform** *Node.js, TypeScript, Redis Streams, MongoDB, OpenTelemetry, Docker* GitHub: <https://github.com/PARASMANI-KHUNTE/Zuvo>

- Engineered an 8-service microservices architecture spanning API Gateway, Auth, Blog, Media, Interactions, Real-time, Worker, and Feed & Search services.
- Implemented Redis Streams for asynchronous inter-service communication and event-driven processing.
- Added OpenTelemetry distributed tracing with Jaeger to trace requests across multiple backend services.
- Implemented circuit breakers, dead-letter queues, background workers, and audit logging for failure handling and operational visibility.

MyCircle | Hyperlocal Exchange Platform *React 19, React Native, Node.js, MongoDB, Socket.io, Redis, BullMQ, Groq AI* GitHub: <https://github.com/PARASMANI-KHUNTE/MyCircle> | Live: <https://mycircle-9gm5.onrender.com/>

- Built a full-stack hyperlocal platform for discovering and interacting with nearby people and local services through 500m, 1km, and 2km search radii.
- Developed real-time chat and interaction features using Node.js, Socket.io, and MongoDB.
- Built web and React Native clients from a shared full-stack codebase and integrated Google OAuth for authentication.
- Integrated Groq AI for content moderation and used Redis + BullMQ for caching and asynchronous notification processing.

Gravitor | Privacy-First Local AI Coding IDE VS Code Extension *API, TypeScript, Node.js, Ollama, Vector Search* GitHub: <https://github.com/PARASMANI-KHUNTE/Gravitor>

- Built a VS Code extension providing AI-powered ghost-text code completion using locally hosted Ollama models.
- Implemented local code-context retrieval using AST-based parsing and vector similarity search over the user's codebase.
- Designed the system around local inference so source code can remain on the user's machine instead of being sent to a remote AI provider.

SYNAPSE | Local Multimodal AI Assistant *Python, Ollama, FAISS, RAG, LLaVA, Whisper, Qwen-TTS* GitHub: <https://github.com/PARASMANI-KHUNTE/SYNAPSE-High-Fidelity-Neural-Interface-AI>

- Built a local multimodal AI assistant using Qwen2.5 7B, DeepSeek-Coder, and Llama 3.2 3B with model routing based on task requirements.
- Implemented RAG with FAISS and out-of-distribution rejection to improve retrieval reliability.
- Integrated LLaVA for image understanding, Whisper for speech recognition, and Qwen-TTS for voice responses.
- Added web-search triggering and different response/emotion modes to support multi-modal assistant workflows.

WORK EXPERIENCE Technical Intern | Hybrowlabs Technologies Remote | Mar 2025 – May 2025

- Delivered 3 client-facing React modules with REST API integration and contributed to reducing the UI bug backlog by approximately 40%.
- Engineered a GPS tracking prototype that ingested live IoT device feeds and displayed real-time location data through a web dashboard.

Web Developer Intern | Akkuraa IT Services Remote | Jan 2025 – Apr 2025

- Built and deployed 2 full-stack MERN applications with Node.js, Express.js, MongoDB, React, and React Native.
- Developed REST APIs and React Native interfaces for production-oriented application workflows and integrated frontend clients with backend services.
- Deployed applications using Render and Vercel, managing environment configuration and release workflows.

SDE Intern | Bluestock Fintech Remote | Nov 2024 – Dec 2024

- Developed REST APIs with JWT authentication and Role-Based Access Control (RBAC) for fintech application workflows.
- Implemented authentication middleware and protected API routes based on user roles and authorization requirements.
- Created Postman API collections and testing workflows to validate authentication, authorization, and endpoint behavior.

Full Stack Intern | Elite Tech Remote | Oct 2024 – Nov 2024

- Built Photoshare, a social platform with JWT authentication and Cloudinary-powered image upload and storage.
- Implemented real-time Socket.io updates for social interactions and application events.
- Developed REST API integration between the React frontend and Node.js backend for authentication, media, and social features.

EDUCATION Guru Ghasidas Vishwavidyalaya Master of Computer Applications (MCA), Computer Science & Technology 2025 – 2027 | In Progress

Bachelor of Computer Applications (BCA), Computer Science 2022 – 2025 | CGPA: 8.20
